

Experience note

I am very lucky to become a guest at the Institute of Fluid Dynamics in Tohoku University, with the support of the 21st Century COE Program. I came to Sendai in October 2006, and will finish my internship here in one week. In the over 2 months of my stay here, I have worked in the Prof. Ohara's Laboratory. This time I have a fantastic experience.

Here the research environment is very good. The instruments for researches are of many sorts and advanced. It is easy and convenient to use whenever needed, and it is very useful for researches. For me, the Integrated Super-computation System is fascinating. The professors are all very kind and of great knowledge. And you can get their kind helps easily both for your researches and for your life. Of course you can freely discuss problems with them without any anxiety, and you will get content answers from them.

Living in Sendai is easy and comfortable. The air here is fresh all the time, and blue sky and white clouds can be often seen. Green trees and red leaves make its favorite view. Besides these, people here are all nice and kind. Although I know very little Japanese and often can't fully understand what they say, I can feel their enthusiasm from their behavior. Also I find it is easy to make friends with Japanese students. In the Laboratory, we discuss about some topics together, and sometime exchange our cultures, and sometime teach each other with own language. During my stay here, I am also glad to have an opportunity to attend the 3rd International Conference on Flow Dynamics at Matsushima. At that time I went to visit Matsushima bay, one of the three most famous views in Japan, so It was a good time for me.

In one word, I am very glad to be given the opportunity to work in such a well funded and supportive institute. I think I will have a wonderful and memorable experience. Thank you for all the kind helps of the people in the laboratory and the COE staff to make my stay here successful.
