

Workshop on Sustainable Atomization and Spray Technology (AFI/TFI-2010)

Content: It will discuss the latest developments in sustainable atomization and spray technology closely related to the promotion of green innovation.

The typical topics of this workshop are the droplet formation, break-up phenomena, free surface phenomena, spray cooling, spray paint coating, soot formation, chemical reaction; they are closely related to atomization and spray technology will be presented in the integrated different academic fields.
