

IFS Collaborative Research Forum(AFI/TFI-2010)

Content: AFI/TFI-2010: Tenth International Symposium on Advanced Fluid Information and Transdisciplinary Fluid Integration

Content: The term, “Advanced Fluid Information” (AFI) was created at Tohoku University to signify both the paradigm shift in fluid dynamics research (experimental, numerical, or theoretical research) and its application using powerful computational technologies. The Symposium on Transdisciplinary Fluid Integration (TFI) has aimed to address transdisciplinary fluid problems arising in various research fields such as environmental science, life science, information technology, and nanotechnology. The tenth AFI symposium combined with the seventh TFI symposium, AFI/TFI-2010, will be held in Sendai during November 1-2, 2010. This symposium will be composed of two sessions: Workshop on Sustainable Atomization and Spray Technology, IFS Collaborative Research Forum (poster session).
