

November 15 – 21, 2008

Austin Convention Center, Austin, Texas

From November 15th to 21st, Super Computer 08 was held at Austin Convention Center, Austin, Texas. Institute of Fluid Science, Institute of Materials Research and Cyberscience Center had set up a booth together at the convention. Attended students actively made presentations to the guests.

SC is one of the most popular conventions held recently and 337 organizations had set up a booth and welcomed 9,608 visitors this year. Many guests showed strong interest of the researches of the institutes. As a result, the top level research and the technologies of the institutes have been appealed to the world.

At the conference, not only the presentations of the organization but also the presentations of the top leader of the industry including C.E.O. of the Dell Inc. had been made. The presentations showed the future of the computer technologies like the GPU computing, the new relation between the environments and the supercomputers and the future of the supercomputing. The information and the knowledge gathered at the convention cannot be acquired from the everyday research and the experience of attending such conference is something that is not able to be replaced by anything else.
