Institute of Fluid Science, Tohoku University

To the New Foundation Stage

**Institute of Fluid Science, Tohoku University,
aims at accomplishment of the following goals by 2016.**

1. Integration of fluid science and advanced academic fields based on the pursuit and universalization of theory about various flow phenomena. Foundation of new academic fields

2. Cross-organizational integration of clusters of each field of aerospace, energy, life science and nano-micro technology, aiming at solutions to the various problems civilized society faces. Focused achievement of research results by strategic centralization of researchers and research resources.

3. Cooperation with domestic and overseas major research institutes such as liaison offices and overseas centers utilizing a network. Aggressive promotion of international joint research and exchange among students and publication of its achievement to the world to join the ranks of international research centers in the field of fluid science.

4. Fostering researchers and engineers who can exercise international leadership for the new development of fluid science by putting into practice Tohoku University's "Open-Door" principle and aggressively accepting various talented personnel from both Japan and abroad.
